Experience

Spectrum Elektrotechnik GmbH — 08.2026 – Present

Engineering & Sales, Part-time · Munich, Germany

- Engineering (Entwicklung): built mechanical and electronic tools that speed up manufacturing and cut the error rate while holding the same quality standard.
- Sales: talk with customers, understand their needs and problems, match them to the right products and prepare quotes.

AI Consulting — 02.2026 – Present

Freelance · Munich, Germany

- Guide finance and fintech companies across the DACH region through their AI transformation.
- Work embedded in their teams and ship the solutions myself instead of only advising.

Algoritma — 06.2025 – 07.2026

AI Software Engineer, Full Stack · Remote · Baku, Azerbaijan

- Embedded with InvestAZ to build internal financial systems end to end, from trading operations tooling to reporting.
- Improved platform performance by 12% and cut manual back-office work through AI-assisted automation.
- Owned the full stack: frontend, backend, data pipelines and LLM integration.

Soluware — 10.2022 – 06.2023

Working Student, Software Development · Ravensburg

- Built internal tools that automated testing and reporting of the Products for Customer Companies.
- Built database-driven dashboards showing the results of the tests.

Ravensburg-Weingarten University — 01.2019 – 08.2021

Software Developer & Engineer, Working Student · Weingarten

- Built an autonomous racing RC vehicle end to end: CAD, 3D printing, sensors and control logic.
- Gave it visual understanding of the road with PyTorch computer vision.

Rover To Mars (RWU) — 02.2019 – 08.2020

Robotics Engineering Internship · Weingarten

- CAD-modelled a rover robotic arm, 3D-printed prototypes and iterated the design through testing to hit the defined targets.

Projects

Notiva — Software Engineer, AI Engineer, System Architect — 2025 – 2026

- An AI-native personal finance OS: an agent reads emails, bank data and documents to cancel unnecessary spending, switch providers, file taxes and report fraud.
- Built the agentic AI workflows, OCR systems, memory layer and tax intelligence.

Multroid Robotics — AI VLM Engineer, Robotics & Mechanical Engineer — 2020 – 2024

- Built an industrial-grade robotic arm and a modular AI manufacturing system.
- Designed the mechanics in CAD, validated them in a simulator I built myself, and detailed the models for CNC-machined production.
- Built an AI hub with Physical AI integrated — years before the LLM hype — letting robots diagnose and resolve their own faults, with a small VLM describing detected problems in natural language.

Independent Projects — Systems & Software Experiments — 2018 – 2026

- Built experimental systems across robotics, web, embedded and AI — deliberately never commercialised.

Education

RWU – Ravensburg-Weingarten University — 03.2019 – 08.2025

B.Eng. Electrical Engineering & Information Technology · Weingarten, Germany

Thesis (grade 1.7): AI-based problem detection & automated solution generation

Skills

Engineering: Next.js · React · Type & JavaScript · Python · C++ · PostgreSQL · Swift/SwiftUI

AI & Data: LLM Integration · AI Pipelines · Document Processing · Multi-Tenant SaaS · MCP Integration

DevOps & Tools: CI/CD · Git · AWS · Redis · Sentry · Claude API · Supabase · Stripe · Figma · NVIDIA Isaac Sim

Languages

English / Azerbaijani / Turkish
Native (C2+)

German
C1 – Professional fluency

Russian
A2 – Basic
